Pre-Certification Testing Services

SLI Compliance offers Pre-Certification Testing services for Health IT products. We are poised to assist companies that are unsure if they're ready to embark on the full-blown ONC certification process. SLI Compliance understands regulations can be complicated and often times confusing, our team of experienced Health IT professionals are here to assist you.

Why Pre-Certification Testing Services?

➤ Gain confidence that your product meets the requirements

➤ Verify your product quality

➤ Test specific areas of concern

SLI Compliance ATL Test Team follows the same process as the official testing for ONC ATL-ACB engagement, with exception of requiring the official documentation and final reporting to the certification body. Pre-Certification Testing includes:

➤ Provide clear understanding of the ONC Certification Program requirements.

➤ Efficiently identify your system scope and define process starting point.

➤ Verify criteria for qualifying technologies.

➤ An opportunity for the Health IT Vendor to decide which criteria need review and test for their system/product.

➤ One-on-One with Health IT subject matter expert resource.

➤ Vendor has the opportunity to ask questions during testing and receives real-time feedback on issues and risks.

This is a seperate service offering, not part of the official ONC-ATL testing.

SLI Compliance® has been authorized to perform Conformance Testing and Certification of Health IT by the US Department of Health and Human Services' Office of the National Coordinator as an Authorized Test Lab (ONC-ATL) and an Authorized Certification Body (ONC-ACB).
